FJÄLL GROUP

to breathe.

Signature Series

To Breathe.

There are places we pass through, and there are places that quietly change how we feel time. Not through spectacle, but through calm shifts in light, space, and stillness. To Breathe belongs to this second kind of place.

Designed by **Fjäll Group**, the project is an exercise in restraint. The architecture does not force itself onto the landscape. Instead, it listens. It follows light, air, and the soft edges between shelter and openness, allowing the form to feel as if it naturally belongs.

At its core, the project is built with EPS-based construction. This choice is not only about efficiency and insulation, but also about freedom in form. It allows the architecture to stay light, to curve gently, and to move without heaviness. Structure becomes something quiet—supporting space rather than dominating it.

Inside, the design by **SECHA** continues this same language. The interiors are calm, simple, and tactile. Nothing is excessive. Every surface is chosen to feel natural and grounded, allowing the spaces to stay open and easy to inhabit. Movement from one area to another feels smooth and uninterrupted, as if the home is breathing with you.

Inside and outside are not treated as separate worlds. Instead, they flow into one another through light, texture, and proportion. The boundaries are softened, so the experience feels continuous rather than divided.

Every curve, opening, and transition is intentional, but never loud. Each decision is made to reduce noise, both visual and emotional, so that what remains is clarity. The architecture steps back, allowing the essentials of living to come forward.

To Breathe is built on a simple idea: space should not overwhelm, it should support. It is not about adding more, but about removing what is unnecessary until only what matters remains.

In the end, this project offers a different kind of freedom. Not freedom through excess, but through ease.
A place where architecture becomes quiet enough for time, air, and presence to be felt more clearly.

Shelter of Sky

Shelter of Sky is shaped around the feeling of being protected without ever losing sight of the world outside.

Its architecture stretches low and wide across the landscape, with broad rooflines that lift and fold like wings at rest. At the center, a softer curved canopy draws the spaces together, creating a sense of shelter while keeping the home open to light, air, and garden.

Built using EPS-based construction, the villa is able to achieve these sweeping forms with greater freedom, while remaining lightweight, efficient, and highly insulated. Expansive glazing softens the boundary between inside and out, allowing the architecture to feel grounded without becoming heavy.

The result is a home that feels calm, open, and quietly connected to its surroundings.

Shelter of Sky is a place made to remind us that feeling protected does not have to mean feeling enclosed.

Veil of Light

Veil of Light is shaped by a series of layered arches that wrap the villa in a soft, protective form while opening the interior to light, air, and landscape.

The structure is formed using EPS-based building technology, allowing the villa's curved geometry to be expressed with greater freedom while remaining lightweight, efficient, and highly insulated. Its smooth monolithic surfaces contrast with expansive glazing, creating a balance between solidity and transparency.

Throughout the day, light moves across the arches and deep reveals, changing the character of the façade from morning to evening and giving the villa a sculptural, almost weightless presence.

Under To Breathe, the villa represents a simple idea:
To live beneath a veil, not one that hides, but one that softens the world and lets the light through.
